

OUR CONTRIBUTION TO CLIMATE CHANGE & EXISTING CLIMATE SOLUTIONS

Housing, transport, and food contribute most to climate change, accounting for about 80% of our total carbon footprints (source: globalcitizen.org).

Some existing climate solutions right now include using solar panels for clean and renewable solar energy, replanting our trees to counter deforestation and consume carbon, and increasing biodiversity to create healthier ecosystems that can help sustain our world. Using these solutions can help us combat climate change.

Youth are taking the lead on the climate crisis. Scan the QR Code to Learn More!
